

YOU HAVE BEEN REFERRED TO AN ENDODONTIST

Although many family dentists perform root canal procedures, your dentist feels your case requires the attention of a specialist.

Endodontists are dentists who have received two years additional training after dental school in root canal treatment and other procedures involving the pulp (the inner tissue of the tooth). They are experienced in treating complicated cases, diagnosing and relieving oral pain, and treating traumatic injuries to the teeth. By referring you to a specialist, your family dentist is demonstrating a personal concern for the quality of your dental care.

After your endodontic therapy is completed, you will return to your family dentist for final restoration, (cap, crown, filling, etc.) of the tooth. Your family dentist will continue to oversee your dental care, including regular check-ups and cleaning. For answers to any questions pertaining to your upcoming endodontic appointment, please visit our website at:
